

INGRESS

Ingress

Creating an Ingress Rule

To get exposed with ingress quickly, you can go ahead and try to create a similar rule as mentioned on the previous page. First, start a **ghost** deployment and expose it with an internal ClusterIP service. See the following commands:

```
$ kubectl run ghost --image=ghost
```

```
$ kubectl expose deployments ghost --port=2368
```

With the deployment exposed and the Ingress rules in place, you should be able to access the application from outside the cluster.

```
apiVersion: networking.k8s.io/v1beta1
kind: Ingress
metadata:
rules:
  - host: ghost.192.168.99.100.nip.io
    http:
      paths:
        - backend:
            service
              name: ghost
              port:
                number: 2368
          path: /
          pathType: ImplementationSpecific
```
