

## MANAGING STATE WITH DEPLOYMENTS

## Managing State with Deployments

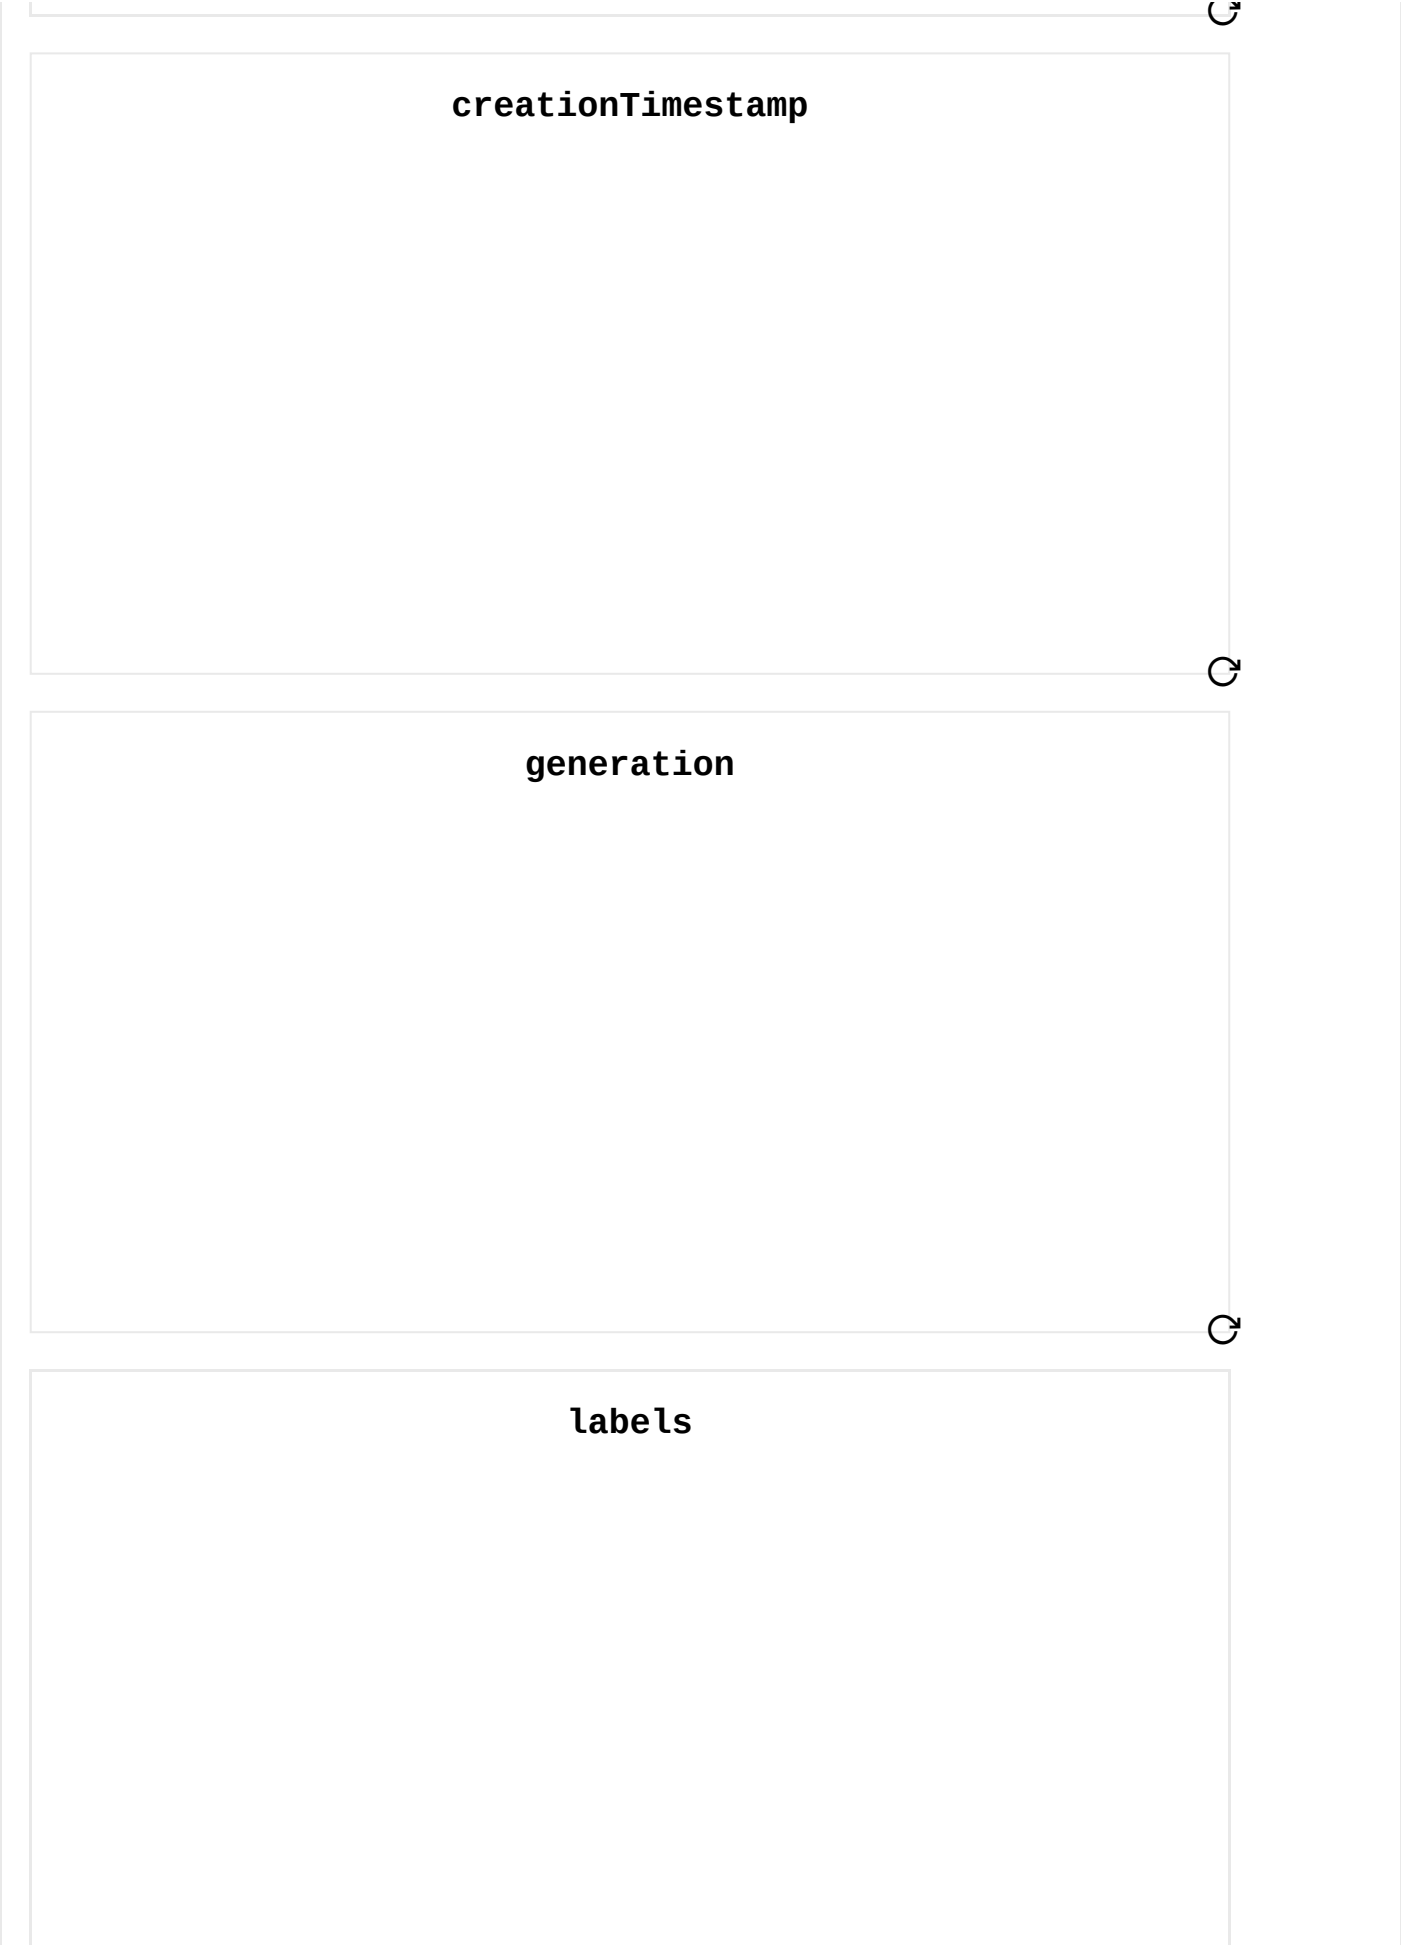

### Deployment Configuration Metadata

Continuing with the YAML output, we see the next general block of output concerns the **metadata** of the deployment. This is where we would find labels, annotations, and other non-configuration information. Note that this output will not show all possible configuration. Many settings which are set to false by default are not shown, like **podAffinity** or **nodeAffinity**.

```
metadata:
  annotations:
    deployment.kubernetes.io/revision: "1"
  creationTimestamp: 2022-12-21T13:57:07Z
  generation: 1
  labels:
    app: dev-web
  name: dev-web
  namespace: default
  resourceVersion: "774003"
  uid: d52d3a63-e656-11e7-9319-42010a800003
```

*Click on the cards below to see an explanation of the information present in the deployment metadata.*

#### annotations

**name**

**resourceVersion**

**uid**
