

INGRESS

## Ingress

### Ingress API Resources

Ingress objects are now part of the **networking.k8s.io** API, but still a beta object. A typical Ingress object that you can POST to the API server is:

```
apiVersion: networking.k8s.io/v1beta1
kind: Ingress
metadata:
name: ghost
spec:
rules:
  - host: ghost.192.168.99.100.nip.io
    http:
      paths:
        - backend:
            service:
              name: ghost
              port:
                number: 2368
            path: /
            pathType: ImplementationSpecific
```

You can manage ingress resources like you do pods, deployments, services, etc. See the following commands:

```
$ kubectl get ingress
$ kubectl delete ingress <ingress_name>
$ kubectl edit ingress <ingress_name>
```
